

Manage Continuous Improvement Initiatives across the plant or enterprise using the Shoplogix Smart Factory Kaizen Tracking module. Move teams to an online Kaizen tracking and sharing portal, allowing teams to build a robust Continuous Improvement culture by learning from previous improvements and sharing across your organization.

Easily Track Kaizen A3 Improvement Projects Using The Shoplogix Online Portal:

Most manufacturers have Continuous Improvement initiatives, however are implemented using archaic concepts such as Microsoft Excel or Word Templates. This makes active projects harder to track and collaborate across departments within the plant.

With Shoplogix Kaizen Tracking...

Project Leads can initiate a Kaizen A3 Project using the Shoplogix Online Portal. Add Team Members, and they receive an invitation to collaborate on the Project. Shoplogix A3 Projects work as an online collaboration tool—all team members can make changes to the project, without the hassle of multiple Excel/Word version conflicts. Share with Management Teams to easily monitor progress and completion of projects.

Manage Your CI Culture And Quantify ROI Across Your Enterprise Using A Collaborative Smart Factory Platform:

Many manufacturing executives struggle to drive company-wide CI culture because they lack the tools to support their plants. Plants work in silos, trying to drive improvements using the limited resources at their disposal, while reducing headcount to stay competitive. Turnover at the plants adds an additional layer of complexity, and it seems every few months a plant is 'starting over' with their improvement initiatives. Quantifying ROI on improvements is generally a manual process. Many projects are inaccurately tracked or lost altogether through an overworked and understaffed organization.

With Shoplogix Kaizen Tracking...

An executive team has the tools they need to drive CI Culture across the organization. The Shoplogix Smart Factory Platform takes the Pulse of every machine, providing accurate visibility into your losses and helps justify improvement initiatives with real-time data. Plants can accurately quantify expected ROI, and track the improvements from start to end.

Shoplogix Kaizen Tracking enables executives to drive a standardized approach to CI Projects and Project Tracking, and an online portal to drive adoption, measure success, and quantify ROI. Each plant is accountable and measured easily with regards to Active & Completed Projects, Time & Cost to Completion, and Quantifiable ROI from Machine Data.

Discover Improvement Strategies By Searching For Previous Initiatives And Learning From Your Peers:

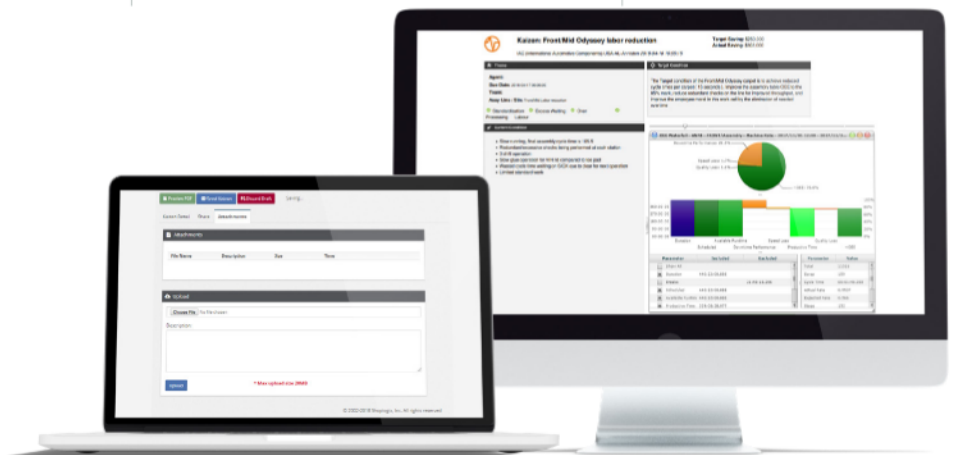

Many plant CI Project Leads (Mechanical Engineers, Quality Engineers, Maintenance Teams, Process Engineers) are tasked with solving a problem with limited data and support. Previous improvements are lost as sharing of information across plants tends to happen at once-a-year global improvement meetings. It is difficult to quantify costs or degree of implementation, and even harder to justify capital expenditures without quantifiable ROI.

With Shoplogix Kaizen Tracking...

A CI Project Lead can search their organization's Kaizen Repository to discover previous project successes to help move initiatives forward. Search by Project Type (Quality, One Piece Flow) or Machine Type (Injection Molding, Wrapping, Assembly) for a start on the project. Connect with other Plants or previous Project Team members, to discover some of the "tribal knowledge" to achieve a higher rate of success. This helps to understand how to quantify your costs and estimate your ROI.

Identify issues and document their resolutions	✓	✓
Monitor tasks to completion using due dates	✓	✓
Use an industry-standard A3 Kaizen Project Template to design and track your initiative	✓	✓
Automatically track improvement progress and receive real-time alerts on machine conditions	X	✓
Easily collaborate using online cloud capabilities	X	✓
Accurately quantify potential for improvement using real data	X	✓
Monitor all CI Projects in real-time for your plant or organization	X	✓
Share successes with your entire organization	X	✓
Search and review historical improvement projects	X	✓
Accurately track ownership and accountability across departments and your entire organization	X	✓

About Shoplogix

Shoplogix is re-defining the manufacturing industry by making the Smart Factory platform the cornerstone of digital production performance transformation. By empowering manufacturers to visualize, integrate, and act on production performance in real-time, Shoplogix helps to uncover hidden shop floor potential and drive rapid time to value.
